

SATYAM TIWARI

B.Tech IT Student — Full-Stack Developer

sttiwari9211@gmail.com | +91-8543874104 | Mainpuri, Uttar Pradesh | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#)

Career Objective

Full-stack developer (Node.js, Express.js, MongoDB, Java, Python/Flask) building applied AI/ML systems — including an 85%-accuracy ML-based resume-screening platform and a heuristic cybersecurity suite — seeking a software engineering role at the intersection of backend engineering and applied AI.

Experience

Freelance LaTeX Developer · Remote · Jan 2025 – Present

- Delivered 2+ print-ready technical books (200+ pages each) with zero client revisions by structuring custom LaTeX macros, multi-level TOC, and BibTeX-automated bibliography.
- Cut client's formatting timeline by 40% by building reusable chapter templates and managing font embedding and page geometry for press-ready PDF output.

Projects

Resume Screening & Candidate Ranking Platform | [Live Demo](#) · [GitHub](#)

Python · Flask · Scikit-learn (TF-IDF, LinearSVC) · spaCy NER · Groq LLM (Llama-3.3-70B) · Render

- Built a dual-mode (Student/HR) Flask platform with a rule-based ATS scoring engine across 6 weighted categories, spaCy NER-based entity/skill extraction, and automated candidate ranking with CSV/Excel export.
- Trained a TF-IDF + LinearSVC role-classification model achieving 85.10% test accuracy across 15 categories, after merging and cleaning 6 public resume datasets (~50 raw categories consolidated).
- Developed and independently tested a Groq LLM (Llama-3.3-70B) module for structured job-description analysis, ahead of integration into the main candidate-feedback pipeline.

CyberShield Hub — Heuristic Cybersecurity Suite (AI Assistant Integrated) (In Progress) | [GitHub](#)

JavaScript · Node.js · Express.js · REST API · Heuristic/Rule-Based Detection · Chrome Extension API

- Building a full-stack platform with 6 active detection modules (phishing, deepfake, malicious QR) and an integrated AI Assistant for real-time risk explanation.
- Engineered the phishing detection engine achieving 91% accuracy across 35 URLs using an 8-rule heuristic classifier with domain entropy scoring and redirect chain analysis.

Full-Stack Portfolio Website | [Live Demo](#) · [GitHub](#)

Node.js · Express.js · MongoDB Atlas · REST API · JavaScript · HTML/CSS · Render

- Architected and deployed a production full-stack app on Render (3+ months continuous uptime) using Express.js routing, middleware chaining, and MongoDB Atlas integration.
- Designed RESTful API endpoints (GET/POST/DELETE, proper status codes, JSON schemas) and built a responsive CSS Flexbox/Grid UI.

Technical Skills

Languages: Python (OOP, File Handling), JavaScript, Java, C

Web & Backend: Node.js, Express.js, Express Middleware, REST API, MongoDB, Flask, HTML, CSS

Tools: Git, GitHub, VS Code, GitHub Pages, Render

Applied AI/ML: Scikit-learn, spaCy, LLM API Integration (Groq)

Achievements

- GitHub Pull Shark:** multiple merged pull requests across public repositories, demonstrating consistent open-source contribution.
- SoftPro technical workshop:** covered JavaScript fundamentals; applied concepts directly in CyberShield Hub and Portfolio Website projects.

Education

B.Tech in Information Technology Rajkiya Engineering College, Mainpuri (AKTU)

3rd Year Currently Pursuing · Expected 2028 · CGPA: 6.82/10

Intermediate (+2): 81% (2023) · High School: 81% (2021)
